

FEATURE	DESCRIPTION	2011 (9.5) Ships 2/11	2010 (9.0) Shipped 2/10	2008 (8.0) Shipped 10/07	2005 (7.0) Shipped 11/05	Previous Versions
Application Folders for Citrix Integration	Provides folder selection for Citrix Application Publishing.	•				
Capture Targeted Items Once, then Track Further Changes	Provides merging user settings stored in a roaming profile to RES Workspace Manager Zero Profile Technology.	•				
Dynamic Privileges	Elevates rights for applications while maintaining default privileges for users.	•				
Improvements (35)	Over 30 improvements were introduced in this release.	•				
Linked Application Actions	Provides an easy way to share application actions between managed applications.	•				
Named User Licensing	Provides named users for RES Workspace Manager 2011.	•				
Remote Host/ URL Zone Rule	Enhances location detection based on the reachability of hosts/ URLs.	•				
RES Automation Manager Service Orchestration Integration	With Service Orchestration, users can request services, while the requested service is approved by the responsible person in the organization.	•				
Restore User Settings by Admin	Enables administrators to restore application settings to a previous state.	•				
Separate Usage Tracking and/or Log Database	Usage tracking and/or log database can be split from the configuration database.	•				
Session Type Zone Rule	Enhances location detection based on session type such as virtual desktop or desktop console session.	•				
User Settings Templates	Provides pre-configured user settings templates for commonly used applications.	•				
Website Security	Provides control over which websites users are allowed to visit.	•				
Whitelisting/Blacklisting User Installed Applications	Provides control over which applications are allowed to be installed by a group of users.	•				
Citrix Application Streaming Integration	Provides integration on virtualization level enabling RES PowerFuse/Workspace Manager features to work with Citrix Application Streaming.	•	•			
Control Mapping of Removable Disk	Controls which drive letter will be used to expose a removable disk to the end user.	•	•			
Customization of Global Settings	Enables the IT administrator to create a workspace container based on exceptions for specific global settings (e.g. different desktop lockdown settings for remote desktops and laptops).	•	•			
Desktop Sampler	Allows the IT administrator to collect information from a desktop. The standalone software can be installed and launched on a desktop. It will run unobtrusively and it will collect data that is stored on a network file share. This data is used as input for the Workspace Designer.	•	•			
Folder Synchronization	Allows the IT administrator to set up and execute synchronization of local and network folders, download files and folders from the network to local computers and upload local files and folders to the network.	•	•			
Improved Management Console	Management console has been redesigned to better align the console with the concept of User Workspace Management. This makes the software easier to understand and improves the learning curve for IT professionals.	•	•			
Improvements (75)	Over 70 improvements were introduced in this release.	•	•			
Microsoft SQL Azure	Support for Microsoft SQL Azure databases. Microsoft SQL Azure is a highly available, scalable, multi-tenant database service hosted by Microsoft in the cloud.	•	•			
Registry Tracing	Shows IT administrators which registry setting relates to an application setting.	•	•			
Restore User Settings by User	Enables users to restore application settings to a previous state.	•	•			
Search Functionality for Directory Services	Enables IT administrators to quickly find the right information in Directory Services containing many users, groups and organizational units.	•	•			
Support for Blacklisting in Network Security	Allows any network connection to be established unless otherwise specified.	•	•			
Support for Multiple Directory Services	Allows the IT administrator to use multiple Directory Services side-by-side in the management console.	•	•			
Support for Orchestration Pack	Allows the IT administrator to use services delivered to users by Orchestration Pack for RES Automation Manager as an access rule for workspace objects like applications, data, printers and settings.	•	•			
Support for Remote Assistance	Enables IT professionals to render remote assistance using Microsoft Remote Assistance from the management console.	•	•			
Support for Subnet Masks in Network Security	Network security rules based on subnets are now supported.	•	•			

Workspace Manager 2011

FEATURE	DESCRIPTION	2011 (9.5) Ships 2/11	2010 (9.0) Shipped 2/10	2008 (8.0) Shipped 10/07	2005 (7.0) Shipped 11/05	Previous Versions
Terminate Running Applications if No Longer Authorized	Enables the termination of a running application that is no longer authorized. Typically used in remote desktop scenarios where users reconnect to their already running session from a different location.	•	•			
Workspace Designer	Assists the IT administrator with creating managed user workspace objects by analyzing data from live desktop environments and predicting the impact on users. The data will be collected by the Desktop Sampler.	•	•			
Workspace Model	Controls which parts are used to compose the user workspace without touching other parts on the desktop. This enabled a smooth implementation of User Workspace Management on existing desktops.	•	•			
Zero Profile Technology	Automatically preserves and applies user settings immediately. It saves the IT professional time and effort and makes user workspaces more independent and personalized without relying on roaming profiles.	•	•			
Alerting	Allows you to set up notifications of specific events, which can consist of sending e-mails to one or more recipients, sending SNMP notifications ("traps") to SNMP systems management frameworks and/or launching external tasks.	•	•	•		
Audit Trail	Provides detailed information on changes made on objects in RES PowerFuse/Workspace Manager.	•	•	•		
Custom Resources	Distributes specific files and folders stored in the database to each computer so that they can be used by other parts of RES PowerFuse/Workspace Manager.	•	•	•		
Filtering	Filtering helps you limit the amount of information presented in the RES PowerFuse/Workspace Manager Management Console. This allows you to focus on a specific part of RES PowerFuse/Workspace Manager.	•	•	•		
Generic Isolation Integration	Allows you to integrate RES PowerFuse/Workspace Manager with application virtualization technologies other than SoftGrid (e.g. Citrix XenApp, VMWare Thinapp).	•	•	•		
Identification Method for Agents	Different identification methods are supported to identify agents for several deployment scenarios.	•	•	•		
Improvements (73)	Over 70 improvements were introduced in this release.	•	•	•		
Microsoft SQL Server 2008	Support for Microsoft SQL Server 2008 databases, including Express Edition. Introduced in SR1.	•	•	•		
Microsoft TS RemoteApp Integration	Automatically publishes applications to computers running Microsoft Windows Server 2008 based on Server Groups. Also supports automatic passthrough to TS RemoteApp if an application is not available on local computer. Introduced in SR1.	•	•	•		
Microsoft Windows 7	Support for Microsoft Windows 7. Introduced in SR7.	•	•	•		
Microsoft Windows Server 2008	Support for Microsoft Windows Server 2008. Introduced in SR1.	•	•	•		
Microsoft Windows Server 2008 R2	Support for Microsoft Windows Server 2008 R2. Introduced in SR7.	•	•	•		
Microsoft Windows Vista	Support for Microsoft Windows Vista.	•	•	•		
Nested Zones	Other zones can be assigned as part of a zone, allowing nesting of locations and devices.	•	•	•		
Network Security	Network Security prevents unauthorized applications from communicating directly with other applications and/or services running on remote computers.	•	•	•		
New Database Architecture	The new database architecture is more reliable and more scalable and allows RES PowerFuse/Workspace Manager to perform faster.	•	•	•		
New Licensing	The new licensing model of RES PowerFuse/Workspace Manager is flexible, easy to use and reduces administration compared to the old licensing model.	•	•	•		
RES Wisdom/Automation Manager Integration	Allows you to automatically schedule and trigger IT tasks, ranging from application installation to configuring computers.	•	•	•		
Scope Control	Controls which individual settings in the Management Console can be viewed or modified by the assigned administrator, based on the access control and workspace criteria of these settings.	•	•	•		
Server Groups for Citrix Integration	Enables publishing of applications to groups of Citrix XenApp servers (i.e. silos) instead of publishing applications to individual servers.	•	•	•		
Support for Citrix XenApp 5.0 and Citrix XenDesktop 2.0	Support for Citrix XenApp 5.0 and Citrix XenDesktop 2.0. Introduced in SR3.	•	•	•		
Support for IBM DB2 databases	IBM DB2 (8.1 or later) databases are supported.	•	•	•		
Support for Microsoft App-V 4.5	Support for Microsoft App-V 4.5. Introduced in SR3.	•	•	•		
Support for Virtual Desktop Infrastructure (VDI)	Workspace Extension and Instant LogOff are now supported for VDI environments like Citrix XenDesktop and VMware VDM. Introduced in SR1.	•	•	•		

Workspace Manager 2011

FEATURE	DESCRIPTION	2011 (9.5) Ships 2/11	2010 (9.0) Shipped 2/10	2008 (8.0) Shipped 10/07	2005 (7.0) Shipped 11/05	Previous Versions
Unattended Installation of RES PowerFuse/Workspace Manager	Installation package supports several public properties to enable unattended installations.	•	•	•		
USB Storage Device Identification	Enables multi-factored authentication for specific computers or applications and controls which specific USB Storage Devices are allowed to be used by specific users. In SR2 support was added for identifying USB Storage Devices on a local client from a remote desktop.	•	•	•		
User Settings	Allows you to make preferences of users persistent across multiple platforms. It stores specific changes of a user profile in a user's home folder	•	•	•		
Website Usage Tracking	Tracks actual web site usage by users. Supported for Microsoft Internet Explorer.	•	•	•		
Workspace Containers	Helps you to group applications, configuration, security and other settings in logical containers. There are many ways to organize a complex Windows environment. All of them are supported.	•	•	•		
Workspace Extender	Merges local applications and a remote desktop into a single workspace. Eliminates the need to switch between a local and remote desktop. Introduced in SR2.	•	•	•		
Add/Remove Citrix XenApp Server Wizard	Assists you with adding or removing Citrix XenApp servers for specific published applications.	•	•	•	•	
Administrative Roles	Allows granular delegation of control in the Management Console. Users, groups, OUs, and zones can be assigned to read or modify specific parts. Can also be used to allow access to specific applications.	•	•	•	•	
Application Building Blocks	Allows easy transportation of application configuration settings from one RES PowerFuse environment to another. A building block stores all properties of an application in an XML file.	•	•	•	•	
Building Blocks	Allows easy transportation of configuration settings from one RES PowerFuse/Workspace Manager environment to another. A building block stores all properties of a setting or feature in an XML file.	•	•	•	•	
Citrix XenApp Integration	Enables creation and management of Citrix Published Applications directly from RES PowerFuse/Workspace Manager.	•	•	•	•	
Create Database Wizard	Assists you with creating a new database on Microsoft SQL Server when migrating an existing RES PowerFuse/Workspace Manager database.	•	•	•	•	
Directory Maintenance	Controls which files and folders should be present on or copied to the user's home directory and/or the user's profile directory.	•	•	•	•	
File Types	Manages Windows file type associations. Normally, the last installed application on a computer handles the file type (e.g. PDF or DOC). File types can be managed per user instead of per computer.	•	•	•	•	
Improvements (98)	Over 90 improvements were introduced in this release.	•	•	•	•	
Instant LogOff	Prevents user profiles to fail unloading due to registry handles not being closed by some applications. Also enhances user experience during logoff of session by disconnecting user session and logoff in background.	•	•	•	•	
Instant Passthrough	Automatically redirects a user to a Citrix Published Application or Microsoft TS RemoteApp if the application is not installed on the user's computer. This technology is essential in mixed environments where both published applications and traditional desktops are used.	•	•	•	•	
Memory Optimization	Allows you to run more applications on a computer by optimizing the physical memory usage of running processes.	•	•	•	•	
Microsoft SQL Server 2005	Support for Microsoft SQL Server 2005 databases, including Express Edition.	•	•	•	•	
Read-Only Blanketing	Prevents users from losing documents and increases security by rendering all local drives read-only.	•	•	•	•	
Removable Disks Security	Controls permissions for usage of removable disks for specific people at specific locations. Read and write permissions can be assigned to Floppy Disks, DVD/CD Disks and Removable Disks like USB/Firewire Sticks.	•	•	•	•	
Support for Citrix Content Publishing	Support for Citrix Content Publishing.	•	•	•	•	
Support for Multiple Domains	Enables using multiple Windows domains in one database.	•	•	•	•	
User Installed Applications	Allows specific end-users to install software on a computer. Also reports what has been installed.	•	•	•	•	
Virtual Channel Support	Uses a bi-directional error-free connection method, which is used for the exchange of generalized data packets between a Terminal Server and an ICA or RDP client.	•	•	•	•	
Web Portal Integration	Enables access to local applications through a web portal.	•	•	•	•	

Workspace Manager 2011

FEATURE	DESCRIPTION	2011 (9.5) Ships 2/11	2010 (9.0) Shipped 2/10	2008 (8.0) Shipped 10/07	2005 (7.0) Shipped 11/05	Previous Versions
Access Balancing	Manages simultaneous logons in your RES PowerFuse/Workspace Manager environment. If many users log on to a server simultaneously, e.g. at the start of the working day or after a reboot of a server, this can cause serious problems to the network and the server.	•	•	•	•	•
Access Control	Access to settings and applications can be based on Organizational Units in Directory Services like (Active Directory and Novell) or through users and groups in the domain. This enables you to use the company's organizational structure to make applications and settings available to the users.	•	•	•	•	•
Administrative Notes	Supports adding comments, remarks and explanations for each user registry action. These notes will assist you in further documenting policy and registry settings.	•	•	•	•	•
Application Configuration	Settings will be applied when the application is launched by the user. These settings include support for Environment Variables, Drive & Port Mappings, Drive Substitutes, Network Printers, User Registry and External Tasks.	•	•	•	•	•
Application Managers	Specific people who are expert users or who are responsible for a certain application can be made Application Managers. In most cases these people are non-IT personnel. Application Managers have access to the Access Wizard. This wizard assists with granting and revoking access to applications.	•	•	•	•	•
Application Security	Prevents access to and use of unauthorized applications. Only applications that are made available to the user through RES PowerFuse/Workspace Manager are authorized. All other applications are unauthorized, and are prevented from starting.	•	•	•	•	•
Connection State	Allows you to control which applications and/or PowerLaunch settings that are configured for off- and online use will be available to the user.	•	•	•	•	•
CPU Optimization	Prevents latency and system freezes at an early stage. CPUShield prevents any application from taking up too much processor time.	•	•	•	•	•
Data Sources	Defines the datasource once, using a simple Wizard in the RES PowerFuse Management Console, and then links the applications that needs to connect to it. When the user starts the application, the database connections will automatically be set up and made available for the application. This makes it easy, fast, and reliable to create data sources.	•	•	•	•	•
Desktop Appearance and Lockdown	Ensure that the corporate identity is maintained throughout the IT environment. With Lockdown parts of the Windows environment can be hidden from the user, reducing complexity.	•	•	•	•	•
Directory Services (NT, AD, NDS)	Provides information on objects, organizes objects and provides authentication and validation of users. This enables RES PowerFuse/Workspace Manager to retrieve available user, group and Organizational Unit information. Windows NT Domains, Active Directory and Novell Directory Services are supported.	•	•	•	•	•
E-Mail Templates	Preconfigures and manages various mail profiles for all users from a single point of administration, without any programming or scripting. Also handles e-mail signatures for Microsoft Outlook and controls legal disclaimers and corporate identity in e-mails.	•	•	•	•	•
Fast Connect Network Drives and Printers	Exposes network drives and network printers to users, but postpones the actual connection to the resource until it is used.	•	•	•	•	•
Files and Folders Security	Enables blocking additional file types and folders on a global level (for example *.vbs, *.avi, or "\\server\share\folder*").	•	•	•	•	•
Hide Drives	Supports the ability to hide (and prevent access to) drives in explorer type dialog boxes.	•	•	•	•	•
Home Directory Maintenance	Controls which files and folders should be present on or copied to the user's home directory.	•	•	•	•	•
Import Windows Shortcuts Wizard	Assists you with adding existing Windows Shortcuts to RES PowerFuse/Workspace Manager.	•	•	•	•	•
Instant Reports	Creates documentation of any part in RES PowerFuse/Workspace Manager with a single click. Documentation can be exported to PDF.	•	•	•	•	•
License Metering and Monitoring	Manages and reports the number of people that are allowed to use an application, based on the application licenses that are available. This allows you to enforce license compliance to e.g. Microsoft licensing models, while managing license usage in your RES PowerFuse/Workspace Manager environment.	•	•	•	•	•
Locations and Devices	Determines which settings should be applied depending on the location where the user is logging on from. Various rules are supported, including IP-address, computer name, hardware requirements, environment variable, computer OU membership, operating system, operating system bit version and terminal server listener name.	•	•	•	•	•
Microsoft App-V Integration	Provides tight integration on virtualization level enabling RES PowerFuse/Workspace Manager features to work out of the box with Microsoft App-V.	•	•	•	•	•
Microsoft Windows 2000, XP and 2003	Support for Microsoft Windows 2000, XP and 2003.	•	•	•	•	•

Workspace Manager 2011

FEATURE	DESCRIPTION	2011 (9.5) Ships 2/11	2010 (9.0) Shipped 2/10	2008 (8.0) Shipped 10/07	2005 (7.0) Shipped 11/05	Previous Versions
Microsoft Windows Shell	Desktop can be accessed using either the RES PowerFuse/Workspace Manager shell or the Microsoft Windows shell. Both shells are managed by RES PowerFuse/Workspace Manager, but the RES PowerFuse/Workspace Manager shell presents a simple windows-like shell with some additional RES PowerFuse/Workspace Manager-only functionality, whereas the Microsoft Windows shell is the exact shell as it is presented by Microsoft, including the various available themes.	•	•	•	•	•
Oracle, Microsoft SQL Server and MySQL Databases	Support for Oracle (9i or later), Microsoft SQL Server (2000 or later) and MySQL (5.x or later) databases.	•	•	•	•	•
Organizational Unit support in Usage Tracking	Enables tracing and selecting usage data based on Organizational Units.	•	•	•	•	•
Personalization based on Language Preferences	Users can choose which language they want to use in their workspace. Based on this selection additional personalization can be set up.	•	•	•	•	•
Printing Preferences	Provides users with simple printer-related information and a Printer Management console. Only user-related printers are shown. Users can manage their documents and prints.	•	•	•	•	•
Session Configuration	Settings will be applied when the user logs on to the desktop. These settings include support for Environment Variables, Drive & Port Mappings, Drive Substitutes, Network Printers, User Registry and External Tasks.	•	•	•	•	•
Session Security	Prevents users from starting more than one session. Computer performance will benefit and license usage will be controlled. Also prevents simple problems with locked data in a user's home directory, which can occur when a user tries to read the same data from two sessions simultaneously.	•	•	•	•	•
Start Menu Handling	Exposes the right application at the right time and the right place for the right user. The user only sees the applications that should be available to him.	•	•	•	•	•
Support for Citrix Published Applications	Supports running Citrix Published Applications instead of full desktops.	•	•	•	•	•
Time Restrictions for Applications	Limits application access based on time. This can be very useful when access to an application needs to be restricted. For example the availability of a database based on the Service level Agreement.	•	•	•	•	•
Usage Tracking	Allows you to monitor application and computer usage in detail, using various selection criteria. PowerTrace can be used to monitor the actual use of applications per user, per application, or per server. It also lets you monitor active sessions and the actual CPU load of an application.	•	•	•	•	•
Workspace Analysis	Previews a user's workspace. It shows all applied configuration, desktop settings, accessible applications, security events and configuration errors for a specific user. Typically used by helpdesks to reduce resolution times.	•	•	•	•	•
Workspace Preferences	Allows users to customize their workspace.	•	•	•	•	•

About RES Software

RES Software, the proven leader in dynamic desktop solutions, is driving a transformation in the way organizations manage, maintain and reduce the cost of their desktop infrastructure. The RES Software award-winning, patented products enable IT professionals to manage and deliver secure, personalized and compliant desktops independent of the underlying computing infrastructure – thin clients, virtual desktops, physical desktops, or server-based computing environments. The company empowers customers, from small to medium-sized businesses to global enterprises, to reduce desktop complexity and meet the essential needs of a dynamic workforce that requires on-demand access to their personalized workspaces.

For more information, visit www.ressoftware.com, or contact us directly.
